Fusible Links

Fusible Links protect wiring harnesses by melting and opening a circuit to prevent damage when an overload of current occurs. Corvettes from 1967-1982 used them to protect the starter, alternator and horn relay circuits. Earlier Corvettes can have these added to prevent damage and fires.

Rule: select a Fusible Link with a smaller gauge than the circuit to be protected. A 14 gauge Fusible Link protects 12 gauge circuit. A 16 gauge Fusible Link protects 14 gauge circuit. An 18 gauge Fusible Link protects 16 gauge circuit.

Fusible Link 14 Gauge	8995212	4.00
Fusible Link 16 Gauge	8995213	4.00
Fusible Link 18 Gauge	8995214	4.00
